

Environmental Policy

In order to conduct business in a sustainable manner, Kalsi Plastics is dedicated to implementing and supporting environmental best practices as well as reducing its effects across the entire organisation. As an essential component of its business plan and operational procedures, it is dedicated to minimising its environmental effects and continuously enhancing its environmental performance. In order to do this, it will:

- **Attain and uphold the ISO 14001 Environmental Management System as a minimal prerequisite, serving as the foundation for continual improvements to its environmental performance.**
- **By controlling the environment's effects at every stage of the value chain and encouraging actions that lower carbon emissions and lessen the effects of climate change, we can protect the environment.**
- **Respect the requirements of all applicable environmental laws, standards of conduct, and compliance mandates.**
- **Utilise energy and natural resources (such as gas, electricity, and water) as efficiently as possible.**
- **Implement efficient protocols to minimise, reuse, and recycle garbage, as well as securely store and dispose of waste that cannot be avoided.**
- **Assess the environmental impact of new equipment, processes, or products it intends to introduce in advance and, where practical, maximise the impact of new technology.**
- **Collaborate with its suppliers to enable sustainable practices, effective environmental supply chain management, and the purchase of goods and services that have the least negative environmental impact.**
- **By supplying appropriate data, raising employee awareness and giving training, and encouraging engagement in environmental development initiatives, you may guarantee the efficient application of environmental rules and procedures.**
- **At every organisational level, set environmental aims and objectives, track and report the organization's performance against them, and promote ongoing development.**
